Doctor : Dr. Sharma Alok .

Admission diagnosis

Duchenne Muscular Dystrophy

History and examination findings

Dakshit Sai is a known case of Duchenne Muscular Dystrophy who underwent Adult Autologous Bone Marrow derived MNC's Transplantation on 19/12/2016 for the first time.

In view of improvements seen after first Adult Autologous Bone Marrow derived MNC's Transplantation, patient was considered for second transplantation.

His improvements are:

- Upper limb fine motor activity has improved, better than before, able to perform with less effort.
- Ambulation has improved, speed has increased, walking pattern has improved.
- Standing balance has improved.
- Walking balance has improved, better than before, manages to walk on uneven surfaces, falls have reduced to minimal.
- Activities have improved, independently but able to do it faster with less effort.
- PEFR has improved, Prev, 120,120,120, Now 150,160,150.
- Chest expansion has improved previous, 4cm,3cm, 3cm, Now 9cm,8cm,7cm.
- Pinch strength has improved.
- Stamina has improved, better than before.
- Falls has reduced, earlier had difficulty in walking on uneven /heighted surfaces now manages to walk without falling, 3 second – 3 second (with extra support).

Treatment Given

1. Neuroregenerative- neurosurgical:

Adult Autologous bone marrow derived MNC's transplantation done as follows:

- [a] With the patient in supine position, local anesthesia was given in region of the left anterior superior iliac spine following which using a bone marrow aspiration needle, 110 ml of bone marrow was aspirated and collected in heparinized tubes and transported to the laboratory. [b] In the Neural tissue culture laboratory the MNC's were separated by the density gradient method. The cells were sent for CD34 counts. [c] The cells were transported back to the O.T. in a sterile cool container. The patient was put in a left lateral position and using a spinal needle the thecal sac punctured in the L4 – L5 space. CSF obtained was sent for examination. The cells injected through the spinal needle. The needle was withdrawn after the cells were injected. [d] Solumedrol 525mg in 500 ml Isolyte P was given intravenously (simultaneously) during the injection.
- [e] MNC's were also injected at specific motor points bilaterally intra muscularly in the following muscles: Deltoid, Biceps, Triceps, Abdominals, Back extensors, Glutei, Quadriceps.

Postop events: Uneventful.

Physiotherapy

Dakshit Sai, a 6year old male, is a case of Duchenne's Muscular Dystrophy.

Therefore aim of physiotherapy is:

- 1.Improve strength of all the muscles without fatigue.
- 2.Improve gait pattern.

Hence, he was put on:

- 1.Bed mobility exercises like bridging, single limb bridging, quadruped, kneeling, kneel sit to stand etc.
- 2.Improving the stability and mobility of trunk muscles like abdominals and back extensors.
- 3.Strengthening lower limb muscles using suspension therapy.
- 4.Gait Training and stair climbing

A CD containing all exercises was given to him to follow up the exercise regime at home.

Occupational Therapy

Dakshit Sai, a 6year old male, is a case of Duchenne's Muscular Dystrophy.

During Occupational Therapy session:-

- 1) Counseling regarding the condition and need to take regular therapy explained
- 2) Therapeutic activities to improve and maintain his functional strength required for day to day tasks
- 3) Activities to improve and maintain his functional Mobility and functional balance
- 4) Therapeutic activities to improve and maintain his hand functions and in hand manipulation skills
- 5) Home program explained

A CD containing all exercises was given to him to follow up the exercise regime at home.

Psychology

Dakshit Sai is a 6 year old male child and a case of Duchenne's Muscular Dystrophy. He was assessed with the mental status examination and a few basic neuropsychological tests. He was well groomed assessment session and was cooperative during the session. He maintained adequate amount of eye contact. The rapport was well established in the first session itself. He displayed neutral amount of psychomotor activity level. The speech of the patient was normal. His volume, tone, reaction time and tempo were average. The form, content of thought and possession of thought were absent. His mood was noted to be euthymic. The client's attention and concentration, orientation, immediate memory, recent memory, remote memory, abstraction and general knowledge were good. His personal, social and test judgment was judged to be intact.

Tests conducted:

Caregiver Burden Scale was administered on the primary caregiver of the patient. The obtained score was 18 indicating No Burden.

Therapy Session conducted:

- Family counseling was conducted.

Dietary Advice

Energy- 1400 Kcal

Protein- 22 gm

A detailed diet chart has been given to the patient

Medication Advised On Discharge

Patient's name: Dakshit Sai Age: 7yrs Date-17/5/18

Diag:DMD, Wt 28kg, 1 episode of febrile convulsion,Hb 13

1. MEDICATION ADVISED ON DISCHARGE

Tab Augmentin	375mg	I-----0----I	x 8 days, after food
Tab Dompan	20mg	I-----0----I	x 8 days, half hour before food
Tab Combiflam		I/2-----I/2---I/2	x 8 days (for pain)
Tb Benfolyst d		0-----1-----0	x 6 months
Tb Vit C	500 mg	0-----1-----0	x 6 months
SypEncorate		7ml----0-----7ml	x 3 month
Cap Evion	400 mg	0----1----0	x 6 months
Tab Lyprinol		0-----1-----0	x 6 months
Tb Aldactone 25mg		1/2---0---1/2	x 6 months
Tb Enalapril 2.5mg		1----0----0	x 6 months
Tb Calyst z		1-----0-----0	x 6 months

Essential HP 1 scoop/day in milk.

Tab Deflazacort 6mg 1-----0----0 x 6 months (give for 20days and then keep 10days gap and again continue the same cycle)

DepuraVitD3 oral solution 5ml once a week for 8 weeks and then once a month for 6 months

2. To continue other medications as advised.

3. Advised to do exercises for 3-4 hours daily for 6 days of week till 6 months under supervision of therapist.

4. [For medical queries, call Doctor - 08828230200 / 08433739911 or email on docneurogen@gmail.com

5. To follow up after around 3 months (21stAugust, 2018). Please confirm telephonically before coming (022 41136565 / 9920200400).

Case Manager

Case Manager: Dr. Naushin, Contact No.8169150836 / Email ID: naushin.neurogen@gmail.com

Please do 1 monthly email/telephonic follow up with case manager on above contact phone numbers/email ID.
